

A Special Offer for:

TerraGo Technologies would like to offer your membership 15% off list-price (government & commercial) toward the purchase of MAP2PDF for ArcGIS and/or MAP2PDF for GeoMedia. Discount is limited to 5 licenses per customer.

About MAP2PDF

MAP2PDF leverages the popular Adobe® Acrobat® PDF document standard to provide a portable mapping format, known as a GeoPDF™. Utilizing MAP2PDF, users are able to create and publish georegistered maps. Users simply create a map using their GIS and then, export the data to a GeoPDF using MAP2PDF.

GIS professionals can then distribute GeoPDFs to non-GIS users who utilize Adobe Reader® to view maps, turn layers on and off, query attributes, display coordinates and create redlines and notes. Changes can be exported for review and consumption back into the master GIS database, all without the need for non-GIS users to have GIS applications, databases or any knowledge of how they work.

Take Your GIS To The Masses

Why use any other GIS reader when virtually every computer worldwide already has one installed? Our free MAP2PDF plug-in turns Adobe Reader into a robust GIS viewing, markup and enterprise collaboration tool that requires no support and very little training. Most people already know how to use PDFs and the additional functionality in MAP2PDF is intuitive and easy to learn. The solution leverages functions already built into Adobe including markup and collaboration tools. You'll have everyone utilizing GIS data in no time and you'll probably have fewer special requests for map creation taking up your time.

Important Features

- Automatic embedding of projection and datum coordinate systems within the PDF
- Allows display of coordinates in alternate projections and datums
- Displays point, line and area attributes of map feature class data with search and query capabilities
- Displays map coordinates in three different coordinate systems
- Allows for zoom to points and objects by coordinates
- Supports GPS integration
- Allows for measuring of distance, azimuth and bearing in the most common units
- Allows users to print maps to any desktop printer
